

Vivarium

Client:

Confidential Pharmaceutical Client

Design Professional:

CUH2A

Location:

New Jersey

Delivery Method:

Construction Management

Key Challenges:

- Co-occupancy issues had to be carefully managed to ensure that the animal studies being carried out were not disrupted or contaminated throughout the project.
- Renovations were completed while maintaining USDA, AALAC and FDA accreditation.

The Vivarium Project included a 2,500 square foot Necropsy Room Renovation, a 2,250 square foot Cage Washer Upgrade, a 3,000 square foot Histology Lab Renovation, and an Air Handling Unit Upgrade. The Air Handling Unit required a double filtration system in order to remove small particles.
