

## Project Profile

### Client:

Pilot School Incorporated

## The Pilot School

### Design Professional:

Purple Cherry Architects,  
Cho Benn Holback + Associates

### Location:

Wilmington, DE

### Delivery Method:

Construction Management

### Key Challenges:

- To build a new elementary school to LEED specifications in order to achieve the desired certification of LEED Silver.

The Pilot School Project is a 74,000 square foot new school building designed to accommodate grades kindergarden through eight including individualized support for each student. The design and construction of the project will incorporate the unique learning philosophy of Pilot to support these student needs including OT/PT elements. Additionally, the current design is targeting a LEED Silver Certification and will incorporate elements such as vegetative roofs, geothermal HVAC systems and solar energy (PV and thermal hot water) elements into the project. The project will be constructed in the Brandywine Hundred and is currently scheduled for occupancy in 2011.
