Project Profile

Client:

The Tatnall School

Tatnall Sedgley Building

Design Professional:

Kieran, Timberlake & Harris

Location:

Greenville, DE

Delivery Method:

Construction Management

Key Challenges:

- To maximize the efficiency of the Lower School operation while improving its interior aesthetics.
- To meet the current and anticipated needs of the student population.

Construction included a new music and computer room, an expanded library with reading pit, and renovations to the third floor administrative offices, the first floor assembly room, and approximately fifteen classrooms, and a state-of-the-art gymnasium. The gymnasium features ground faced masonry bearing walls with a unique exposed steel truss roof structure. A hardwood gymnasium floor and adjustable/retractable basketball backstops provide a complete athletic arena. Designed to accommodate multiple functions, the gym also includes movable wall panels. A new skylight system was installed throughout the classroom areas providing natural light and added spaciousness. Staff and students occupied the school throughout the construction process.
